3 Pillars of Enterprise Mobile to Support Data Quality

High quality, accurate and timely data produced using mobile apps are achieved with these 3 pillars:

TRUE OFFLINE

Access to **ALL** necessary data offline: all assets, all locations, all meters, all asset history… exceeding 1M records on the device . Enables users to create new assets, start inspections, submit requests or update work orders, locations and assets.

SCALABILITY

Grow with your data, user base and mobile needs over time without performance loss. Apps handle upwards of 30% data, user and feature growth per year without suffering **any** performance loss.

FAST & RELIABLE DATA SYNC

Keep **thousands** of records up-to-date and synched with your EAM in seconds. Never lose a drop of data – data never leaves the device until sync confirmation is received from EAM.
