

THE NOT-SO-SECRET SECRETS THAT CAN HELP YOUR SPATIAL PROJECT

Butch Berlemann

ABOUT ME

- Live on the Front Range - Go CSU Thunderwolves !
- 21 Years working with GIS and EAM systems.
 - City of Pueblo CO - GIS Coordinator
 - Colorado Springs Utilities - GIS/Maximo Developer
 - Cohesive/Starboard/Microdesk Maximo Spatial Consultant
 - SSP - GIS Consultant
 - Southern Company – Maximo Spatial Architect

OVERVIEW

- Establish GIS hierarchies in Maximo
 - Automation Scripting
- Integration Overview
- Monitored the health of the Integration
 - Python
 - REST
- Testing and validating
 - Excel

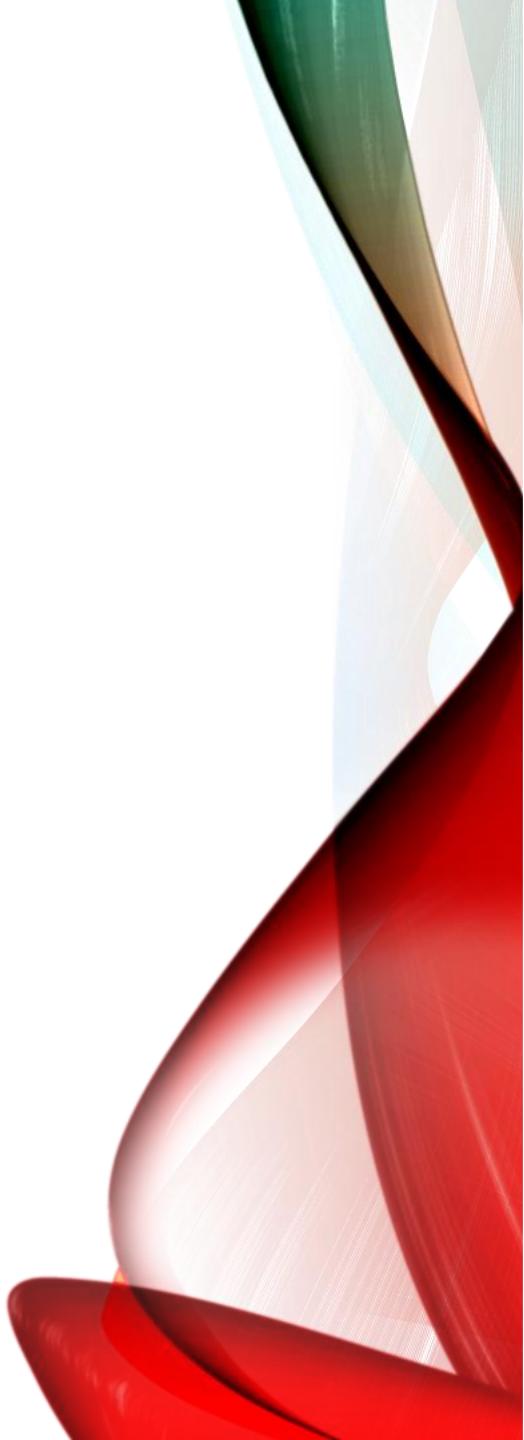

PROJECT OVERVIEW

- Southern Company
 - 9 million gas and electric customers in 6 states.
- Electric Distribution
- Greenfield Project
- Three Sites
- 112 Linked Layers
- Total Linked Records
 - Assets = 7,929,778
 - Locations = 7,741,976
 - Total = 15,671,754+

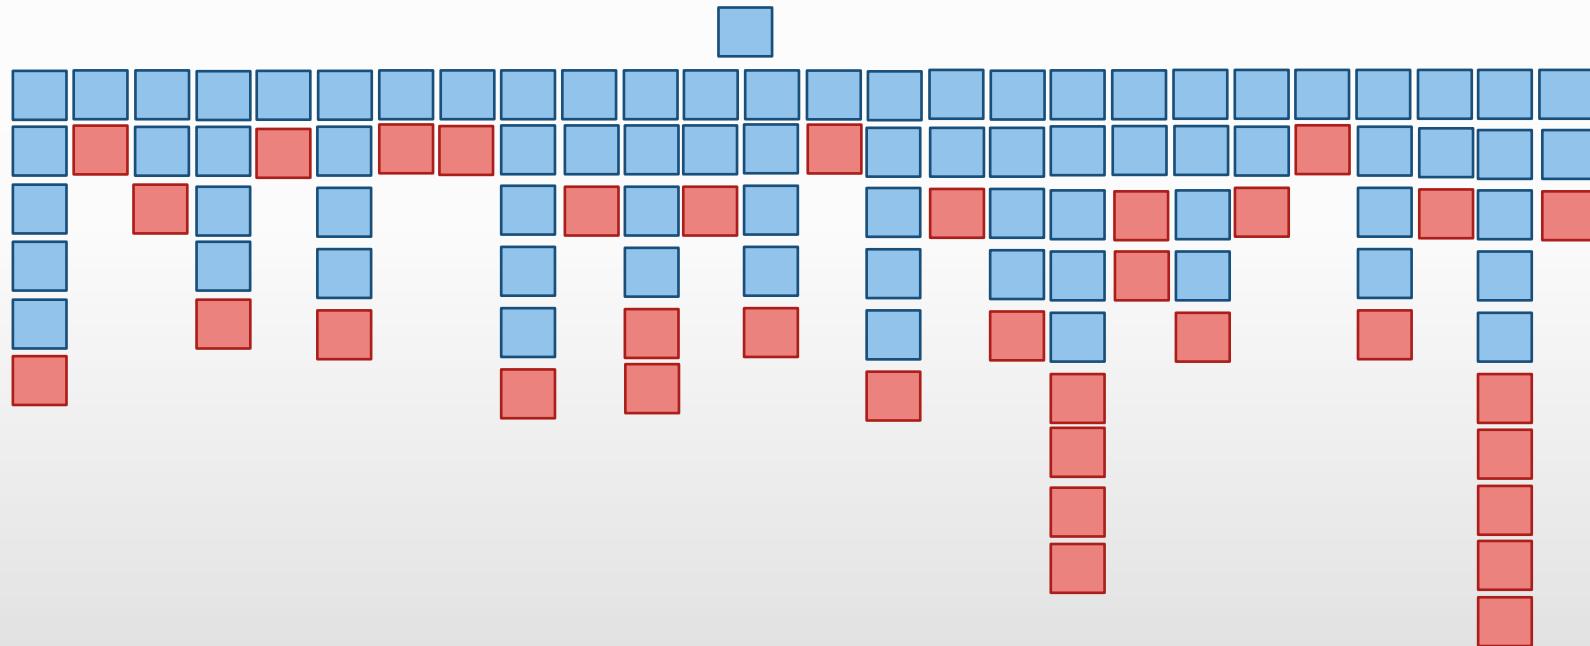

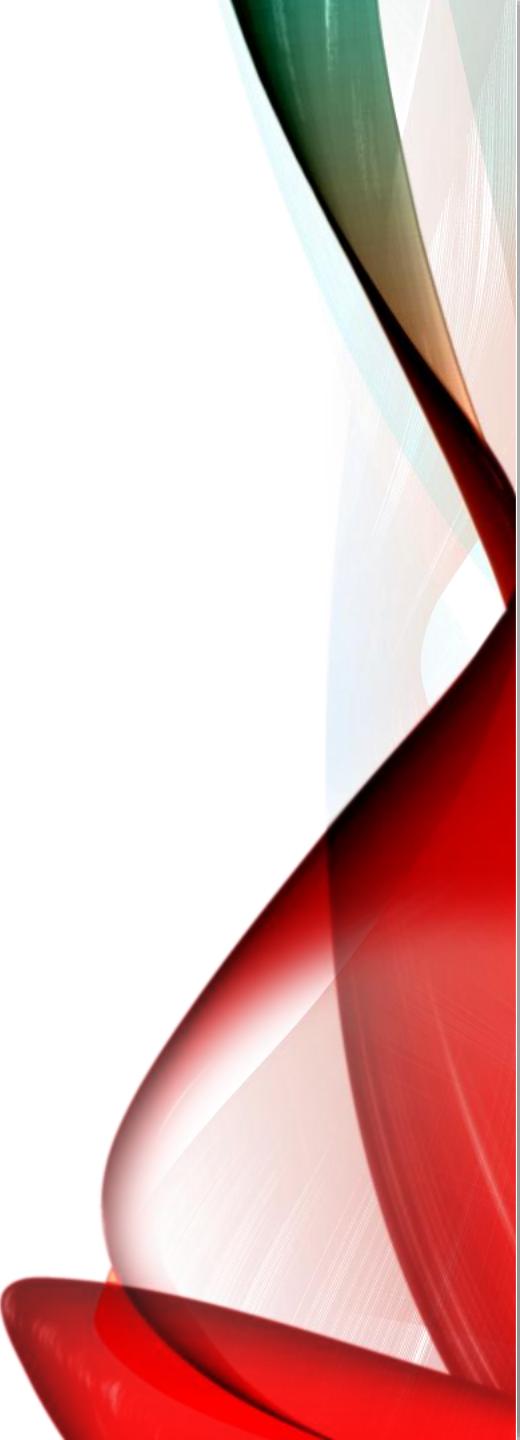

ASSET LOCATION HIERARCHY

- Three Sites
- 26 children possible per site
- Location can have:
 - Child
 - Grand child
 - Great-grandchild
 - Great-great grandchild
- 5 different Assets types possible for a Location.

ASSET LOCATION HIERARCHY

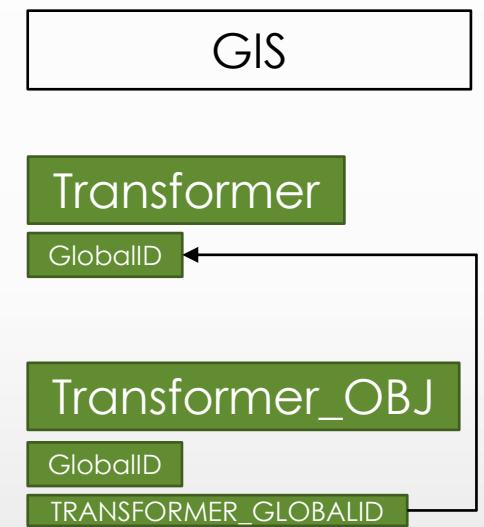

ASSET LOCATION HIERARCHY APPROACH

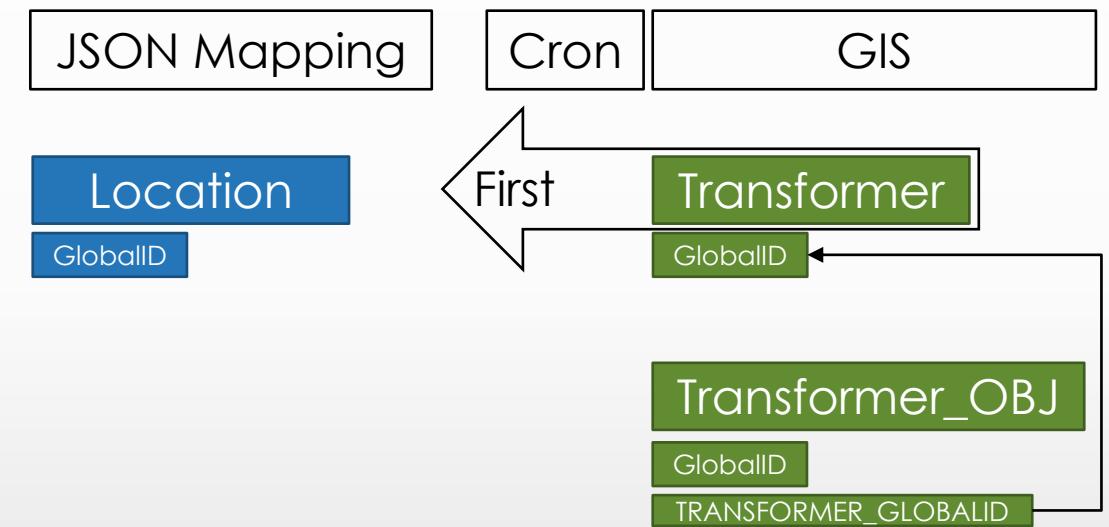

- Hierarchy is maintained in GIS using two fields
 - Global ID
 - Parent Global ID
- Fields added to Maximo Asset and Location
- JSON mapping translates GIS fields to Maximo MBOs
- Automation Scripts used to
 - Identify parent and assign the Location
- Cron scheduled process parents first

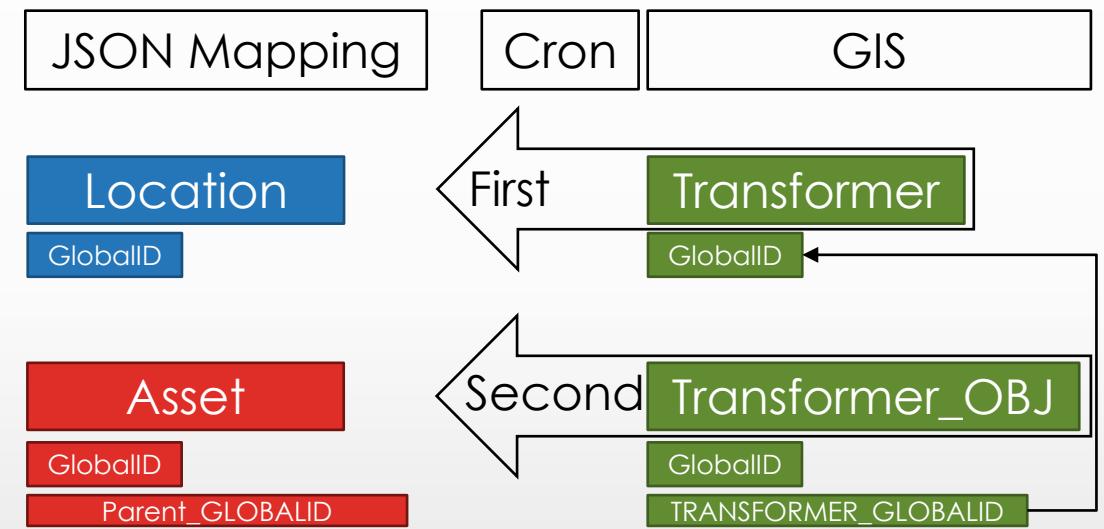

ASSET LOCATION HIERARCHY

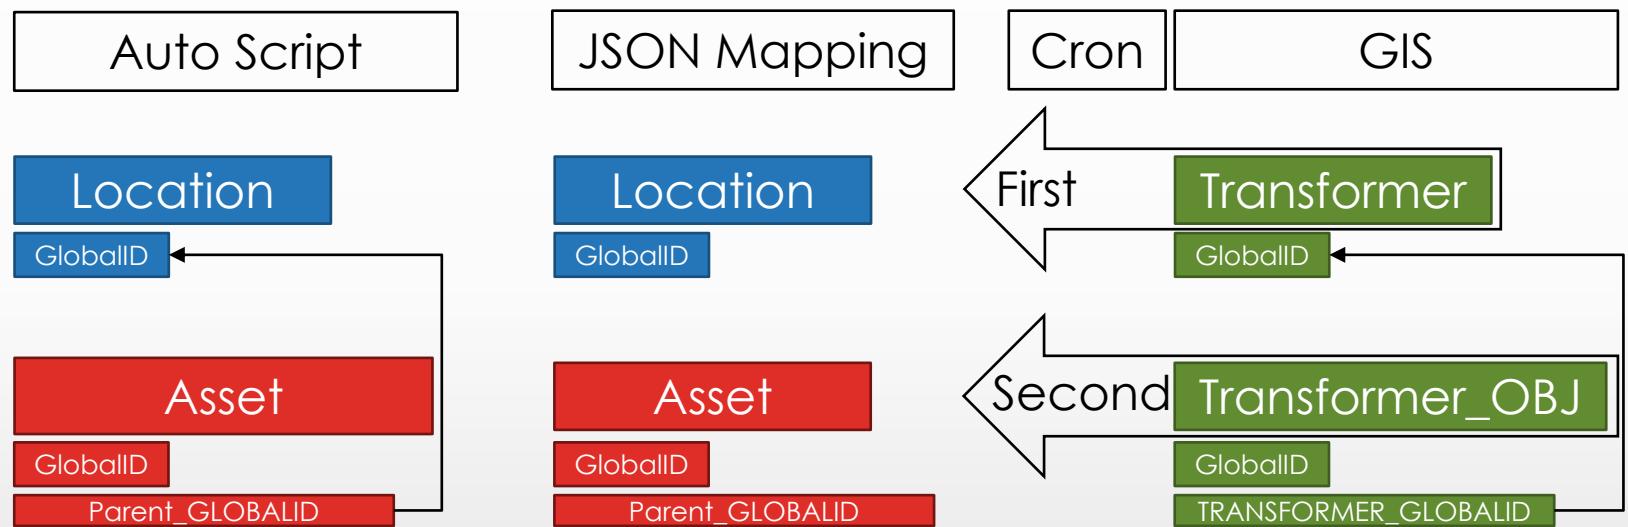

ASSET LOCATION HIERARCHY

ASSET LOCATION HIERARCHY

ASSET LOCATION HIERARCHY

INTEGRATION OVERVIEW

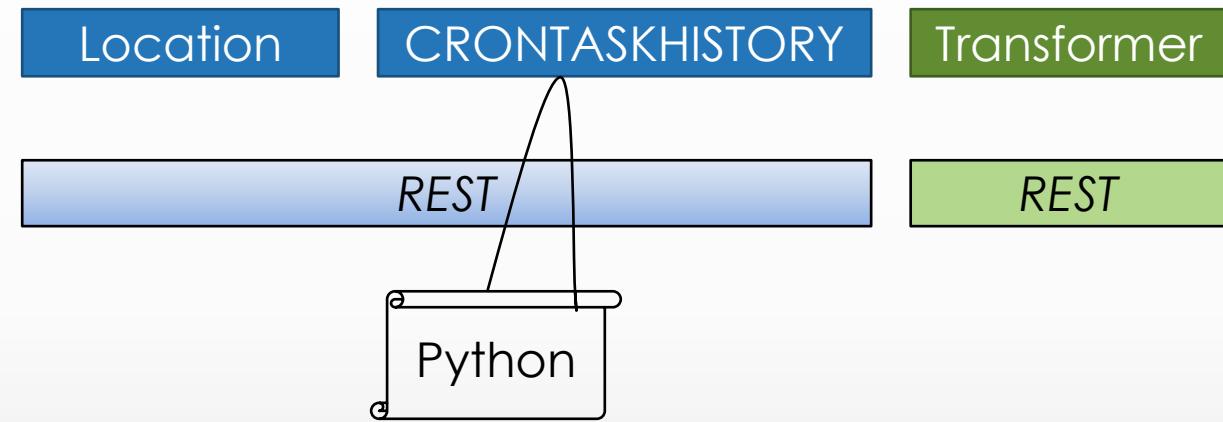

- Time based Integration
- Why ?
 - GN to UN
- How ?
 - :LASTSUCCESSFULSTARTTIME
 - CRONTASKHISTORY
 - Action, Error is null
 - Update URL

MONITORING OVERVIEW

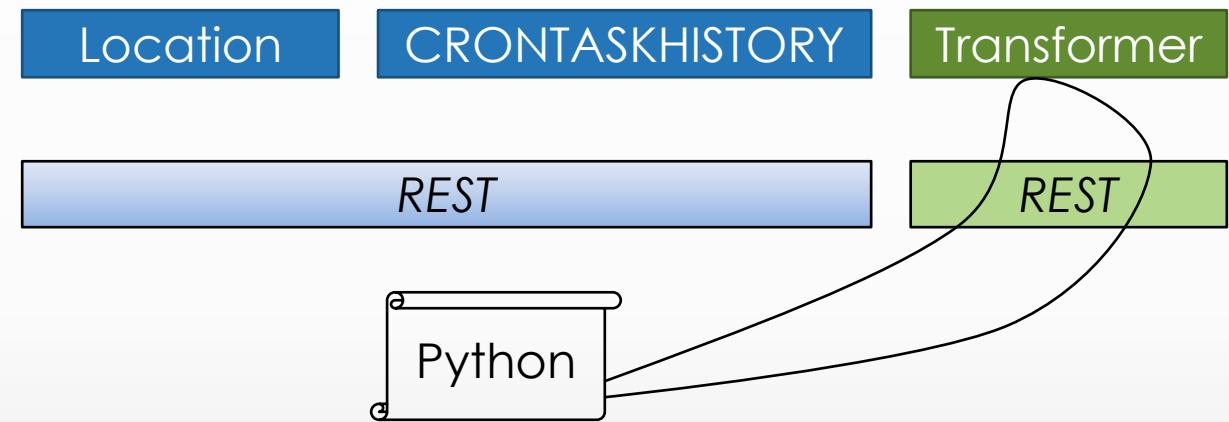

- CSV Cron Parameters
 - GISOBJECTNAME
 - URL
 - ENTERPRISESERVICENAME
- Python
 - urllib Module
 - Handles Application Security
- Maximo REST API
 - CRONTASKHISTORY
 - ASSET
 - LOCATION
- Output Log

MONITORING

<https://maximoserver/maxrest/rest/mbo/CRONTASKHISTORY?INSTANCENAME=GISOBJECTNAME& format=json>

MONITORING

<https://gis/arcgis/rest/services/Folder/Map/FeatureServer/50/query?where=DATEFIELD>=timestamp&f=json>

MONITORING

https://maximo/maxrest/rest/mbo/LOCATION?GISKEY=~eq~2002&_format=json

MONITORING

```
2022-09-14 15:15:22.881769 Start GISOBJECT
2022-09-14 15:15:22.881769 Maximo Cron History URL = https://maximo/maxrest/rest/mbo/CRONTASKHISTORY?INSTANCENAME=GISOBJECT&_format=json

2022-09-14 15:15:23.385015 ----cronStatus-----
2022-09-14 15:15:23.385015 Cron Ran on -- MXSERVER at 2022-09-13T05:30:00-04:00

2022-09-14 15:15:23.769029 ----gisCount-----
2022-09-14 15:15:23.769029 GISURL = https://gis/arcgis/rest/services/Folder/Map/FeatureServer/50/query?where=DATEFIELD>=timestamp&f=json
2022-09-14 15:15:23.926164 GIS Record Count = 26
2022-09-14 15:15:31.103250 ACHTUNG !!! -- No Data Found in Maximo for GISKEY 2002 -- https://maximo/maxrest/rest/mbo/LOCATION?GISKEY=~eq~2002&_format=json
2022-09-14 15:15:23.926164 Maximo Record Count = 1
2022-09-14 15:15:51.630797

2022-09-14 15:15:51.949906

2022-09-14 15:15:52.148454 End GISOBJECT
```

MONITORING

- 2 – 3 Hour runtime
- 2000+ line log file
- Summary of processed records
- Benefits
 - Actionable results in hours
 - JSON can be stored
 - Allowed data to be retested
 - Created detailed Integration history

TESTING

- Excel
 - HYPERLINK Function
 - ID
 - GISMBO

13	Decom Maximo		https://MaximoServer/maxrest/rest/mbo/LOCATIONS?LEGACY_ID=~eq~&_includecols=LOCATION&_format=json&_exactmatch=1

TESTING

- Excel and URLs
 - Familiar tech
 - URL reduce variables
 - One path to MBO
 - No SQL access required
 - Narrows triage attention
 - Testers are empowered

CONCLUSION

- Establish GIS hierarchies in Maximo
 - Automation Scripting
- Integration Overview
- Monitored the health of the Integration
 - Python
 - REST
- Testing and validating
 - Excel
